

TerranearPMC Acquires Human Factors Applications, Inc.

September 30, 2010

TerranearPMC, LLC (TPMC) has announced the acquisition of Human Factors Applications, Inc. (HFA) from Alion Science and Technology Corporation of McLean, Virginia. HFA was one of the early leaders in Unexploded Ordnance (UXO) and Military Munitions Response Program (MMRP) projects. HFA has performed more than 80 MMRP site investigations to date and has performed UXO clearance and removal projects throughout the United States and overseas.

TPMC has performed MMRP RI/FS and clearance projects as well as UXO clearance and removals with multiple and active projects underway for the DOD and DOE. Additionally, TPMC also offers extensive experience and capabilities dealing with munitions and explosives of concern (MEC) at Army Ammunition Plants, radiological materials (e.g., depleted uranium) on closed and active ranges, and DOE explosive research and test facilities.

TPMC's President, Amar Raval said that "The addition of HFA's personnel, skills, and experience will strengthen TPMC's capabilities for both current and future MMRP and MEC projects. This will provide TPMC with added in-house UXO specialists, and engineers and scientists, experienced in these types of projects. Our U.S. Army Corps of Engineers and DOE clients, whom we are supporting across the country, should see immediate value from this transaction and the added capabilities TPMC can offer."
