Exton, PA - TerranearPMC, LLC (TPMC) has reached agreement on the sale of its infrastructure / asset management line of business to SIA Solutions (U.S. SBA certified 8(a) company based in Houston, TX) with whom TPMC has long-standing teaming relations.

The infrastructure / asset management business is a combination of public-private (P3)/ public-public (P4) partnership deal closing services, alternative energy, strategic planning, robotics, technical and economic feasibility analysis services plus unique project development for diverse infrastructure projects including groundwater/wastewater treatment facilities, firing ranges, port development, and complex real estate transactions. After a strategic review of its business lines, TPMC recognized that this line of business would have greater success in a company that was focused on asset management as its primary line of business.

TPMC's Chairman, Amar M. Raval said "This approach is in the best interests of TPMC shareholders and our asset management team. We believe that this team will be very successful within SIA." TPMC employees who comprise the asset management team will be moving to SIA. Harry Kleiser, who had been TPMC's President since 2012 will now be SIA's President, and has grown this business line and built a strong and talented team. Mr. Kleiser said "Our team sees this as a tremendous benefit to our clients and a great opportunity for growth. Our clients will be working with the same team they have known for years making this move a seamless transition."

About TerranearPMC

TerranearPMC, LLC (TPMC) is a small business that supports DOE and DOD clients on complex and high hazard environmental remediation and D&D projects. We have continually supported DOE-Environmental Management (DOE-EM), National Nuclear Security Administration (NNSA), and multiple U.S. Army Corps of Engineers (USACE) districts across the U.S. since 1992. The company also provides groundwater and wastewater treatment systems operations and maintenance (O&M), long term monitoring (LTM), all underpinned by robust Health and Safety (H&S) and Quality Assurance (QA) programs.
